

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	29 July 2026
Team ID	
Project Name	Visualizing Housing Market Trends:An Analysis of Sale Prices and Features using Tableau
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming encourages team members to share creative ideas for analyzing housing market data and identifying important trends.

It helps in exploring different factors that influence house sale prices, such as location, area, and property features.

The process promotes collaboration and allows participants to build upon each other's ideas. Various visualization techniques and dashboard features can be discussed and prioritized during brainstorming sessions.

The most impactful ideas are selected to create an interactive and informative Tableau dashboard.

This approach ultimately helps in generating meaningful insights and supporting data-driven real estate decisions.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this brainstorming session to identify the factors affecting housing prices and select the best problem statement for Tableau data visualization.

🕒 10 minutes to prepare

🕒 1 hour to collaborate

👥 2-8 team members

Before you collaborate

Discuss the housing market dataset, identify important features such as Sale Price, Location, Bedrooms, Bathrooms, Square Footage and Year Built, then finalize the project objective.

🕒 10 minutes

Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

Dataset understanding

Explore the housing dataset and understand its structure, variables and data quality.

Feature selection

Identify key features like Sale Price, Location, Bedrooms, Bathrooms, Square Footage, Year Built, etc.

Tableau planning

Plan how to visualize the data and what insights we want to discover using Tableau.

1

Define your problem statement

How can Tableau help visualize housing market trends and identify the factors affecting sale prices?

🕒 5 minutes

**Visualizing Housing Market Trends:
An Analysis of Sale Prices and Features using Tableau.**

Key rules of brainstorming

Stay focused on housing data

Prioritize useful features

Encourage new ideas

Think with data

Listen to every team member

Prepare for Tableau visualization

Step-2: Brainstorm, Idea Listing and Grouping

2 Brainstorm

Write down any ideas that come to mind that address your problem statement.

🕒 10 minutes

TIP

Write as much as a sticky note and stick the greatest ideas to assistance your team win.

3 Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

🕒 20 minutes

TIP

Add sentence-like tags to identify topics to make it easier to find, organize, categorize and prioritize insights. Cluster, as a theme within your notes.

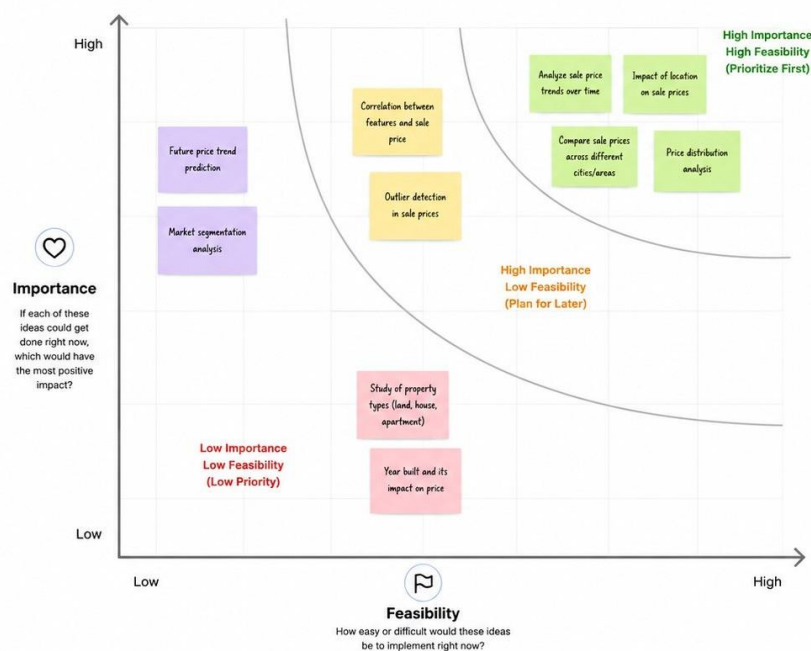

Step-3: Idea Prioritization

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

🕒 20 minutes

Prioritize First (Do Now)

Ideas that are both important and feasible. These will have the greatest impact and are easier to implement.

Plan for Later

Ideas that are important but may require more time, data, or resources to implement.

Consider if Possible

Ideas that are important but currently less feasible. Revisit when more resources are available.

Low Priority

Ideas with lower importance and feasibility. These are not the focus right now.

Our Top Priorities

- Analyze sale price trends over time
- Impact of location on sale prices
- Compare sale prices across cities/areas
- Price distribution analysis

Focus on ideas in the green zone first to achieve maximum impact with available resources.
